                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Appli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Appli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, Ap

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mouse neural

                                                                    CDNA library. Two other isoforms, neural Mena+ (see W37151) and neural Mena++ (see W37153), are also disclosed. Unlike mammalian Ena (Mena, see W37148), neural Mena isoforms exhibit neural tissue-specific distribution. Based on the disclosed Mena and Evl genes (see also W2956-98) and proteins (see also W37148-49), a variety of methods and compositions are provided for screening, isolating and characterising endogenous and exogenous factors, drugs and therapeutic agents useful to evaluate and/or control cytoskeletal dynamic events involved in normal and abnormal cell morphology, adhesion, motility, growth and/or differentiation. A method of detecting a modulator of Mena activity/expression is

                                                                                                                                                                                                            Neural Mena+ protein; mammalian Ena; Enabled protein; Ev1 protein; cytoskeleton; cell morphology; cell adhesion; cell differentiation; cell growth; cell motility; mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This protein comprises novel murine neural Mena+. Its amino acid sequence was deduced from a cDNA clone (see V02998) obtained from a mouse brain cDNA library. Neural Mena+ contains an exon that introduces 244 amino acids between amino acids 238 and 239 of mammalian Ena (Mena, see W37148). Two other isoforms, neural Mena++ (see W3152), are also disclosed. Unlike Mena, neural Mena+++ (see W37153), are also disclosed. Unlike Mena, neural Mena isoforms exhibit neural tissue specific distribution. Based on the disclosed Mena and Evl genes (see also V02996-97) and proteins (see also W37148-49), a variety of methods and compositions are provided for screening, isolating and characterising endogenous and exogenous factors, drugs and therapeutic agents useful to evaluate and/or control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cytoskeletal dynamic events involved in normal and abnormal cell morphology, adhesion, motility, growth and/or differentiation. method of detecting a modulator of Mena activity/expression is

This protein comprises novel murine neural Mena++. Its amino acid sequence was deduced from a CDNA clone obtained from a mouse brain sequence was deduced from a cDNA clone obtained from a mouse brain comparing two other isoforms, neural Mena+ (see W37151) and neural Mena+ (see W37151), are also disclosed. Unlike mammalian can (Mena, see W37148), neural Mena isoforms exhibit neural cissue-specific distribution. Based on the disclosed Mena and Evl genes (see also V0296-98) and proteins (see also W37148-49), a variety of methods and compositions are provided for screening, isolating and characterising endogenous and exogenous factors, cisolating and characterising endogenous and exogenous factors, cisolating and characterising endogenous and exogenous factors, cytoskeletal dynamic events involved in normal and abnormal cell corposed method of detecting a modulator of Mena activity/expression is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              315

The present sequence represents a rat Neural-Wiskott-Aldrich syndrome protein (N-WASP). Wiskott-Aldrich syndrome (WAS) is a syndrome associated with recurrent infections and eczema, in which an afflicted patient hiss a tendency to haemmorhage. The protein and related cDNA sequences are used to develop drugs for the treatment of WAS. The primers and probes can be used in genetic analysis. The antibodies are used to detect the WAS

Wiskott-Aldrich syndrome with is a syndrome associated with recurrent infections and eczema, in which an afflicted patient has a tendency to haemmorhage. The protein and related cDNA sequences are used to develop drugs for the treatment of WAS. The primers and probes can be used in a penetic analysis. The antibodies are used to detect the WAS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  --ighvgwdpntgsdlnnldpelknlfdmcgileaqlke---retlkviydfiektggve 266

                                                                                                                                                                                                                                                                               34;
                                                                                                        diaphanous). This protein has active type Rho protein-combining ability, has proline-combining ability, has a M.W. of 150 KDa measured by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) and its gene is positioned at human chromosome 5q31.2. The nucleic acid can be used for the recombinant production of the protein. The protein is useful for the elucidation of mechanism of diseases such as respiratory tract oversensitiveness, bronchial asthma, acute marrow leukaemia and marrow

The protein has active type Rho protein combining activity and profilin combining activity. (I) can be used in screening for its inhibitors, by measuring the extent of its inhibition by a compound exhibiting inhibitory properties. The protein is used for reconstituting actin cell structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             455 LHPTPSTAPGPHVPLMPPSPPSQVIPASEP----KRHPSTLPVISDARSVLLEAIRKGIQ 510

Its amino acid sequence shows a high proline content, but there is no homology to any known proline-rich antigens of mycobacteria. Novel M. tuberculosis proteins (see Wal861-57) are claimed. These can be produced as recombinant proteins, especially in bacterial, yeast, fungal or higher eukaryote host cells, and used for diagnosing tuberculosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a mouse Rho target protein, mDia (mammalian diaphanous) which is used in a method to extract a human mDia protein. This human protein has active type Rho protein-combining ability, has proline-combining ability, has proline-combining ability, has a M. of 150 KDa measured by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) and its gene is positioned at human chromosome 5q11.2. The nucleic acid can be used for the recombinant production of the protein. The protein is useful for the elucidation of mechanism of diseases such as respiratory tract oversensitiveness, bronchial asthma, acute marrow leukaemia and marrow
                                                                                                                                                                                                                                                                                                                                                                                                                  Rho Protein; mDia; mammalian diaphanous; target protein; murine; Rho protein-combining; prolline-combining; chromosome 5q31.2; disease; respiratory tract; oversensitiveness; bronchial asthma; marrow leukaemia; marrow dysplasia syndrome.

Its amino acid sequence shows a high proline content, but there is no homology to any known
and other mycobacterial infections in humans or animals. The claimed proteins can also be used for epidemiological studies, i monitoring vaccination, and for the development of vaccines and

              Proteins (see Wil851-57) are claimed. These can be produced as recombinant proteins, especially in bacterial, yeast, fungal or higher eukaryote host cells, and used for diagnosing tuberculosis and other mycobacterial infections in humans or animals. The claimed proteins can also be used for epidemiological studies, for monitoring vaccination, and for the development of vaccines and anti-mycobacterial drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TALQAPAVPPPAPLQIAPGVLHPAPPPIAPPLVQPSPPVARAAPVCETVPVHP----LP

 This represents a recombinant human diaphanous polypeptide (Dial), having diaphanous-specific amino acid sequence and bioactivity. The polypeptide is useful for screening for agents that modulate binding of human diaphanous polypeptide to a binding target. The modulators are useful for stabilizing actin filaments. Probes and primers of the nucleic acid are useful for diagnosis of conditions, and as immunogens, reagents,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 446

atrophin-1 related general.

attrophin-1 related general.

agonists of (II) are used to treat or prevent conditions requiring an agonists of (II) are used to treat or prevent conditions requiring an (III), inhibitory nucleic acid and/or competitive polypeptides are used to treat conditions requiring reduced activity or expression of (II). Typical of these conditions are Ohnsoch Marie-Tooth disease;

Schwartz-Jampel syndrome; crystalline corneal dystrophy, dentatorubral pallidoluysian atrophy and ataxia. These diseases, or susceptibility to them, can be diagnosed by detecting mutations in (II)-encoding genes and/or by measuring levels of (II). Cells that express (II), or their membranes, can be used to screen for specific (ant)agonists, potential that appears of (II), or its fragments, are used as probes to isolate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             related sequences; as reagents for research, diagnosis and drug screening; for chromosome identification; and for expressing recombinant (II). (II) and their fragments, are used to raise specific antibodies (useful for isolation and identification of (II)-expressing clones, for purification of (II), as therapeutic antagonists, as assay reagents and in drug screening); in vaccines; to screen for (ant)agonists and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      292

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   οý
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        methyltransferase activity in a cell by measuring the methylation of certain proteins. These proteins are Sam68, SLM-1, SLM-2, high R and WASP. Also proteins are antibodies capable of recognising proteins containing methylated arginines. These can be used in the stimulation of an immune response and to measure the degree of methylation of the proteins. The method is useful in the diagnosis of cancer, cancerous cells and Wiskott-Aldrich syndrome. It is also useful for measuring the extent to which ligands are binding to receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       arginine methylation; arginine methyltransferase activity; mouse; Wiskott-Aldrich syndrome; antibody; SLM-1; SLM-2; WASP; hnRNP K.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Assaying arginine methyltransferase activity useful for determining whether a cell is cancerous or has cancer potential comprises measuring the methylation of specific substrates such as SLM-1, SLM-2, Sam68
                                                                                                                                                                                                                               488

            The Expressed Sequence Tag was isolated from a human brain cDNA library as part of a large set of ESTs which can be used as markers for human genes transcribed in vivo. They can be used to facilitate tagging of most human genes, for mapping locations of expressed genes on chromosomes, for individual or forensic identification, for mapping locations of disease-associated genes, for identification of tissue type, and for prepn. of antisense sequences, probes and constructs. EST01293 has a "poor" coding probability as evaluated using the coding-region prediction program CRM. See also 059041-061440.
                                                                                                                                                                                                                                                                                                              2376 cttgtagtgttgaattctcttaaaggaatgcttgaattttttcattattgtttattgtt 2435

Homo sapiens

Ad1261 to Ad3419 represent specifically claimed secreted expressed
sequence tags (sESTs) isolated from human, mouse, xenopus and rat
tissues sources. The sESTs can have a range of activities depending on
the tissues they were isolated from. The activities depending on
the tissues they were isolated from. The activities include: chemotactic;
broliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic;
chemostatic; thrombolytic; antinflammatory; cytostatic; antibacterial;
chemostatic; thrombolytic; antinflammatory; cytostatic; antibacterial;
cartifungal; antiviral; antidiabetic; antibarhmatic; vulnerary; antiulcer;
cartifungal; neuroprotective; nocropic; antiparkinsonian; antipsoriatic;
cerebroprotective; anticonvulsant; and antidepressant. The sESTs can be
used for gene therapy and in vaccines. The sESTs are useful as probes for
the identification and isolation of full-length cDNAs and genomic DNA
molecules which correspond to the sESTs. Proteins encoded by the sESTs
are useful in assays for determining blological activity and raising
antibodies. They may be useful for treatment of autoimmune disorders;
(multiple sclerosis, insulin dependent diabetes), allergic conditions
of seteoporosis, osteoarthritis, central nervous system disorders
(hazheimer's, parkinson's, Huntington's disease, stroke), coagulation
disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's
disease), tumours, bacterial, fungal or viral infections, depression
and psoriasis. Ad3420 to Ad3425 represent linker variants which are
in the exemplification of the present invention. Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (sESTs), useful for treating various disorders such as autolmmune, infectious, and central nervous system disorders \cdot Sequence 242 BP; 83 A; 52 C; 65 G; 42 T; 0 other; Claim 1; Page 450; 618pp; English. ```
The present sequence is one of a large number of 5 ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5 ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3 untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5 ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5 UTR is rarely included 5 ESTs are derived from mRNAs with intext 5 ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5 ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; mouse; xenopus; rat; secreted expressed sequence tag; sEST; expressed sequence tag; EST; probe; chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; antibaesic; haemostatic; thrombolytic; antiinfammatory; cytostatic; antibacterial; antifungal; antiviral; antidiabetic; antiasthmatic; vulnerary; antiparkinsonian; antiviral; antidiabetic; neuroprotective; nootropic; antipsoriatic; cerebroprotective; anticonvulsant; antidepressant; gene therapy; vaccine; autoimmune disorder; multiple sclerosis; allergic condition; insulin dependent diabetes; asthma; myeloid cell deficiency; ulcer;

proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; haemostatic; thrombolytic; antinflammatopy; cytostatic; antibacterial; antifundabetic; antibathmatic; vulnerary; antibucer; osteopathic; neuroprotective; notropic; antiparkinsonian; antibacterial; osteopathic; neuroprotective; nootropic; antiparkinsonian; antipsoriatic; cerebroprotective; anticonvulsant; and antidepressant. The SESTS can be used for gene therapy and in vaccines; The SESTS are useful as probes for the identification and isolation of full-length coNAs and genomic DNA molecules which correspond to the SESTS. Proteins encoded by the SESTS are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, antibodiess), and the sclerosis, parking the sclerosis, parking the sclerosis, parking the sclerosis, parking the sclerosis and the scentral nervous system disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A41261 to A43419 represent specifically claimed secreted expressed sequence tags (SESTs), isolated from human, mouse, xenopus and rat tissue sources. The SESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (SESTS), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's disease), tumours, bacterial, fungal or viral infections, depression and psoriasis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                           The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
          Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

sequences, corresponding to human secreted proteins. Y64651 to Y65438 sequences, corresponding to human secreted proteins. Y64651 to Y65438 represent the EST-related proteins corresponding to Z4265 to Z43052.

The 5' ESTS can be used to identify and isolate 5' untranslated regions (UTRs) and upstream regulatory regions which control the location, development stage, rate, and quantity of protein synthesis, as well as stability of mRNA. The ESTS are also useful as probes for chromosome mapping, and to obtain full length cDNA clones. The ESTS can also be used in forensic procedures to identify individuals, or in diagnostic procedures to chentify individuals having genetic diseases resulting from abnormal gene expression. The products may also be used in gene therapy protocols. The nucleic acids encoding signal peptides can be used for directing extracellular secretion of a polypeptide or the insertion of a cell. The proteins encoded by the EST sequences may be useful in treating a variety of human conditions. Secreted proteins have therapeutic value, and the identification of new secreted proteins is valuable. Z4224 to 24224 and Y64644 to Y64650 represent sequences used in the

Identifying compounds capable of modulating cellular response useful for treating Alzheimer's disease and cardiac disorders, involves incubating compound with cell expressing Homer protein and cell-surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homer proteins are the products of neuronal immediate early genes (IEG's). They selectively bind the carboxy termini of certain cell-surface receptors, certain intracellular receptors and binding proteins. Many forms of Homer proteins contain a "coiled-coil" structure in the carboxy terminal domain which mediated homor and heteromultimerisation between Homer proteins. Homer plays a significant role in mediating receptor-activated calcium mobilisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            renal, uterine and bronchial tissue disorders and for affecting the natural aging process. These compounds are also useful for modulating receptor-mediated calcium mobilization, by exposing a cell to the compound to modulate calcium mobilization that normally occurs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            from intracellular stores. Thus, cells expressing a Homer protein can be used to identify a compound capable of modulating a cellular response mediated by cell surface receptor or intracellular receptor. Compounds identified in this manner which modulate Homer protein activity are useful for treating disorders associated with glutamate receptors such as epilepsy, glutamate toxicity, memory disorders, disorders of disorders of learning, stroke, schizophrenia, Alzheimer's disease, tissue degeneration and disorders of brain development and also for treating disorders associated with Homer protein activity which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antagonist of metabotropic glutamate receptors, or to activate an intracellular signaling pathway, especially an inositol triphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 includes cardiac, muscular, vascular, neurological, psychiatric,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present sequence encodes a human cytokine signal regulator designated CKSR-1. CKSR polypucleotides and polypeptides are useful for treating or preventing a disorder associated with increased or decreased expression or activity of cytokine signal regulators (CKSR). They are especially useful for the diagnosis, prevention and treatment of cell proliferative disorders; such as arteriosclerosis, atheroscietosis, hepatitis; cancers; such as leukemia and melanoma; and immune disorders; such as acquired immunodeficiency syndrome (AIDS),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps,

The polynuclectide sequences given in A26346 to A26458 encode the human secreted proteins given in Y91451 to Y91691. The human secreted proteins secreted proteins given in Y91451 to Y91691. The human secreted proteins can have activities based on the tissues and cells they are expressed in. Examples of the activities are: cytoStatic; immunosuppressive; antiHIV; antiInflammatory; nootropic; neuroprotective; antiasthma; antipsoriatic; and cardiant. The polynucleotides and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the proteins in a sample or by determining the presence of mutations in the polynucleotides. Specific uses are described for each of the polynucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of canoer, tumours, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, hepatic and renal disease, inflammation, allergies, athirities, infections, AlDS, spinal cord injuries, transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, reproductive disorders, gastrointestinal disorders, respiratory disorders and metabolic disorders. The proteins or polynucleotides can also used as food additives or preservatives. The proteins are also useful for identifying their binding partners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated human genes and the secreted polypeptides they encode, useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders

represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiporiatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiparkinsonian; nootropic; antidabetic; hypotensive; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; cardiant; thrombolytic; captulant; vasotropic; antidabetic; hypotensive; cardiant; antifungal, antithromatic; antithyroid; antibacterial; antiviral; antimunosuppressive; antioning the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative cused to treat cancers, proliferative disorders, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, candiovascular disease, storme, when the proteins and mucleic acids may be stormed, systemic lupus erythematosus, severe combined immunodeficiency corrections.
                                                                                        Immunostimulant; thrombolytic; coaquiant; vasotropic; antidiabetic; immunostimulant; thrombolytic; coaquiant; vasotropic; antidiabetic; arative disorder; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; collesterol disease; diabetes mellitus; hypothyroidiam; collesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; bone damage; cartilage damage; antiinflammatory disease; coaquiation; thrombosis; contraceptive; ss.
                                           vulnerary, antipsoriatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant;

The present sequence is one of 23 nucleic acids, collectively referred to as SECX nucleic acids, which encode novel secreted human proteins. Various SECX nucleic acids were cloned into insect cells and human embryonic kidney 293 cells and quantitative expression of the clones was analysed. By detecting the presence of a SECX nucleic acid or polypeptide in a sample it is possible to diagnose a pathological condition, especially cancer, associated with aberrant SECX expression or activity. Antibodies, and primers and probes are used, respectively, to detect SECX polypeptides and sECX nucleic acids in this method.
SECX nucleic acids, polypeptides and antibodies are also useful for treating, preventing or delaying conditions associated with aberrant SECX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Mutations of the gene lead to a replication error phenotype (RBR+) in some colorectal cancers. Wariants at codon 502 (proximal to the ExoIII domain) and codon 506 (within ExoIII) of the gene were separately found in 2 colorectal cancer non-polyposis colorectal cancer, owing to a mutation in a pol delta allele, can be treated by administration of the gene. Patients with RBR+ tumours can be treated to prevent accumulation of somatic mutations leading to resistance to cytostatic agents. The gene can also be used to diagnose a predisposition to colorectal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA polymerase delta mutant and corresp. coding sequence - associated with replication error phenotype in colorectal tumours, useful for diagnosis and therapy
